

Prashidha Rawal

Kathmandu, Nepal | whoisprashidha@gmail.com | github.com/Prashidha001

[linkedin.com/in/prashidha-rawal-032697212/](https://www.linkedin.com/in/prashidha-rawal-032697212/) | +977 9842612909

Career Objective

Looking for Data Annotator opportunities to apply expertise in Python and Typescript to build and deploy intelligent systems. Proficient in TensorFlow, Keras, PyTorch, and Scikit-learn with experience in developing NLP models, predictive systems, fine-tuning large language models, and building RAG-based chatbots. Skilled in data preprocessing, feature engineering, model evaluation, and end deployment of machine learning workflows.

Education

BSc (Hons) Computing with Artificial Intelligence	2023–Present
--	--------------

Islington College

London Metropolitan University

Kamal Marg, Kamalpokhari, Kathmandu

School Leaving Certificate	2022
-----------------------------------	------

Kathmandu Model College,

National Examinations Board

Bagbazar, Kathmandu

Secondary Education Examination	2020
--	------

Bhanubhakta Memorial School,

National Examinations Board

Panipokhari, Kathmandu

Skills

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, Go, Rust

Frameworks & Technologies: TensorFlow, PyTorch, Django(DRF) PostgreSQL, Celery, WebSockets, Docker, FastAPI, Scikit-learn

Tools & Platforms: Git, Jupyter Notebook, Google Colab, CodeBerg, NumPy, Pandas, K-means, FeatureTools, Keras, uv

Soft Skills

- **Communication, Problem-Solving, Teamwork, Adaptability, Time Management**

Projects

AI Content Editor – Web Application (Live Demo)

Languages and frameworks used: Next.js, MongoDB, Redis, Tailwind CSS, TypeScript.

I built a web application for AI-powered content creation using Next.js as the primary framework. The application features a WYSIWYG editor, with MongoDB to store user data and Redis to manage chat history.

Emotion Classifier (GitHub)

Languages and frameworks used: TensorFlow, Jupyter Notebook, Python, FastAPI

I developed Emotions Classifier from text using a fine-tuned DistilBERT model. This includes data preprocessing, model training, evaluation, and deployment via FastAPI.

Bidirectional LSTM Next Word Prediction using Neural Networks (GitHub)

Languages and frameworks used: Python, Jupyter Notebook, TensorFlow, Keras.

I created a bidirectional LSTM model for next-word prediction, processing sequences in both forward and backward directions. I implemented text pre-processing with built-in tokenization.

MNIST DATASET Classification (GitHub)

Languages and frameworks used: Python, Jupyter Notebook, Tensorflow, Numpy

A simple and interactive project to visualize and explore the MNIST Handwritten Digits Dataset. This project helps you understand how image data is structured and visualized in machine learning workflows.

Certifications

- AI Fundamentals, DataCamp, 2025
